### Tips and Information

These tile have a very wide natural color range. Mix all boxes before installation.  
Not recommended for use in wet areas or outside in freezing climates.

**Sealing before Grouting** - use a commercial matte stone sealer

Sealing this tile before grouting will help the grouting and cleanup process. Test small area to verify results.

**Grouting** - use a sanded modified polymer grout

It is recommended to use a grout bag to grout this rustic tile and avoid smearing the grout over the tile. Clean tile immediately with clean water and remove any grout residue.

**Final Cleanup** - use a commercial grout residue remover

If a grout haze remains after tile and grout are thoroughly dry - several days - purchase a grout haze removal product that contains Sulfamic acid and carefully clean the tile. Carefully follow the manufacturers directions.

**Final Sealing** - use a commercial matte stone sealer

Sealing the grout will help maintain the color and make cleaning easier. The tile can be resealed at this time also.

**Always use premium quality products and refer to the manufacturers directions.**
